

# 1

# 2

When you start the application you'll be presented with this screen.

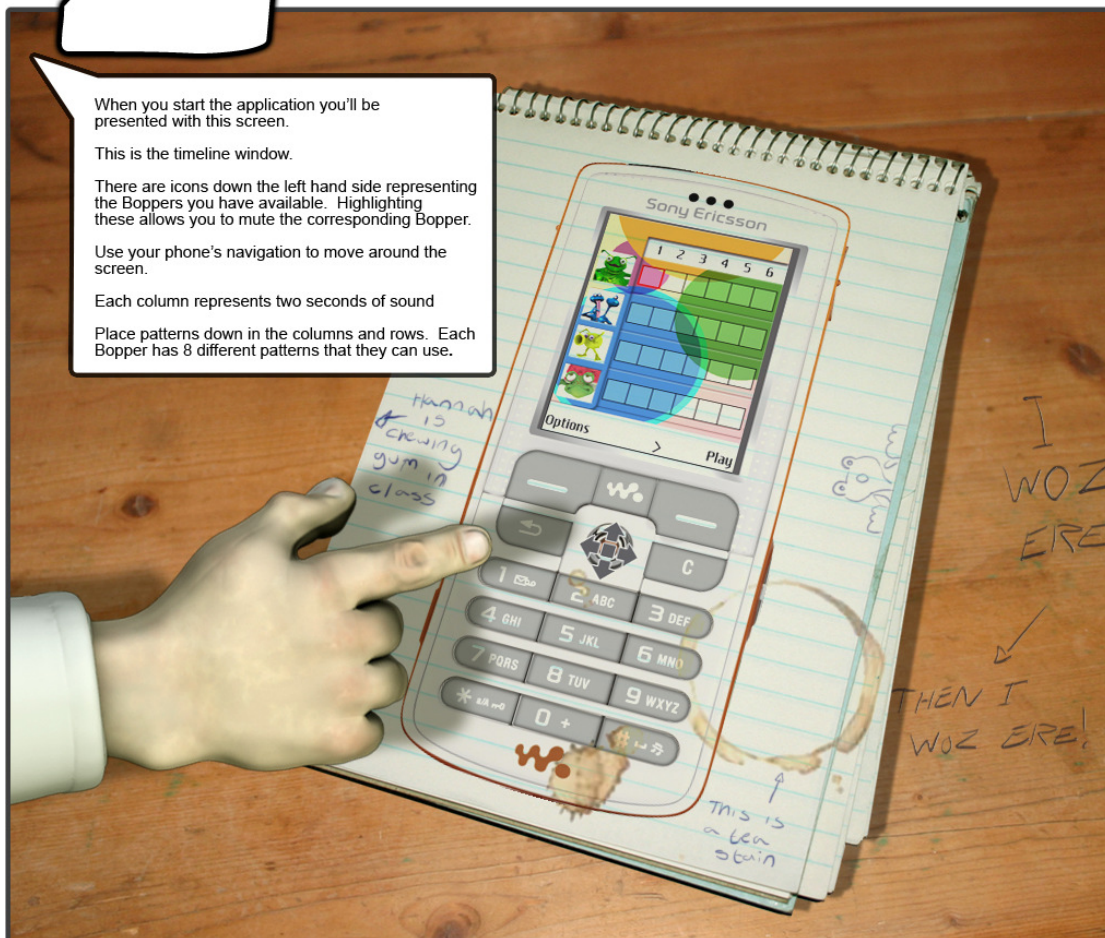

This is the timeline window.

There are icons down the left hand side representing the Boppers you have available. Highlighting these allows you to mute the corresponding Bopper.

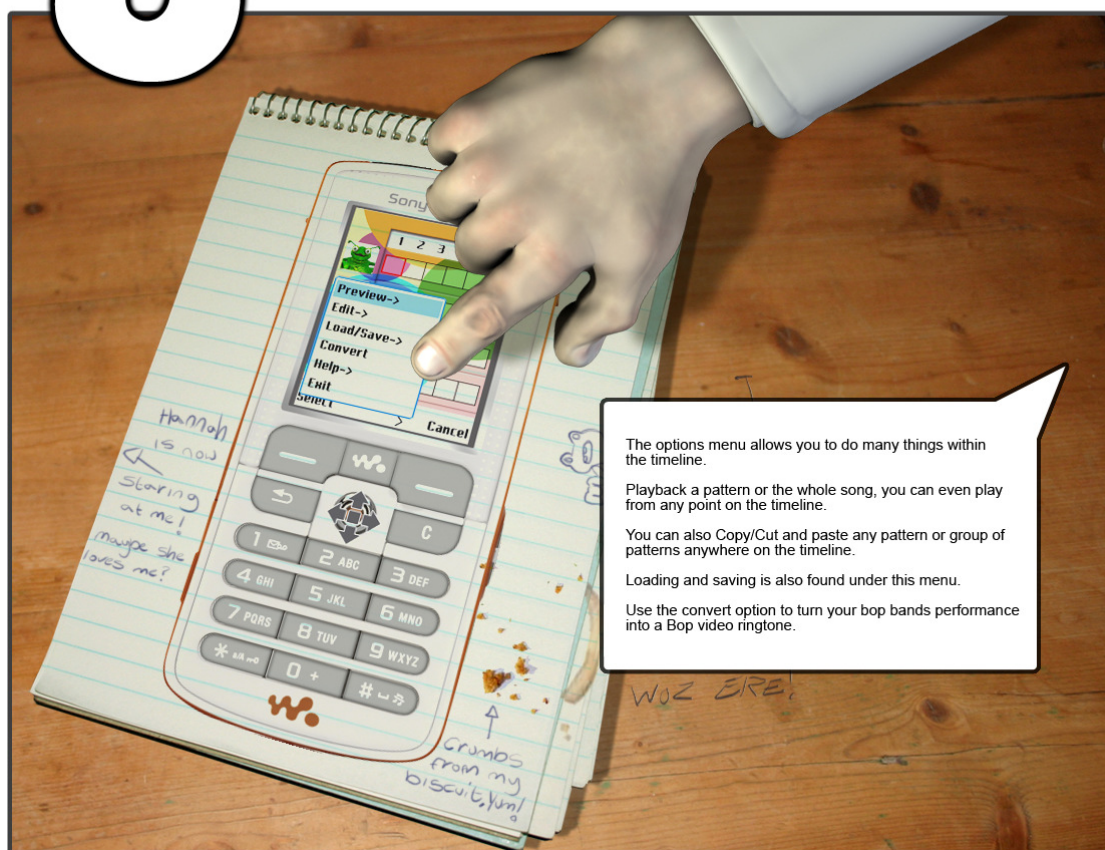

Use your phone's navigation to move around the screen.

Each column represents two seconds of sound

Place patterns down in the columns and rows. Each Bopper has 8 different patterns that they can use.

# 3

The options menu allows you to do many things within the timeline.

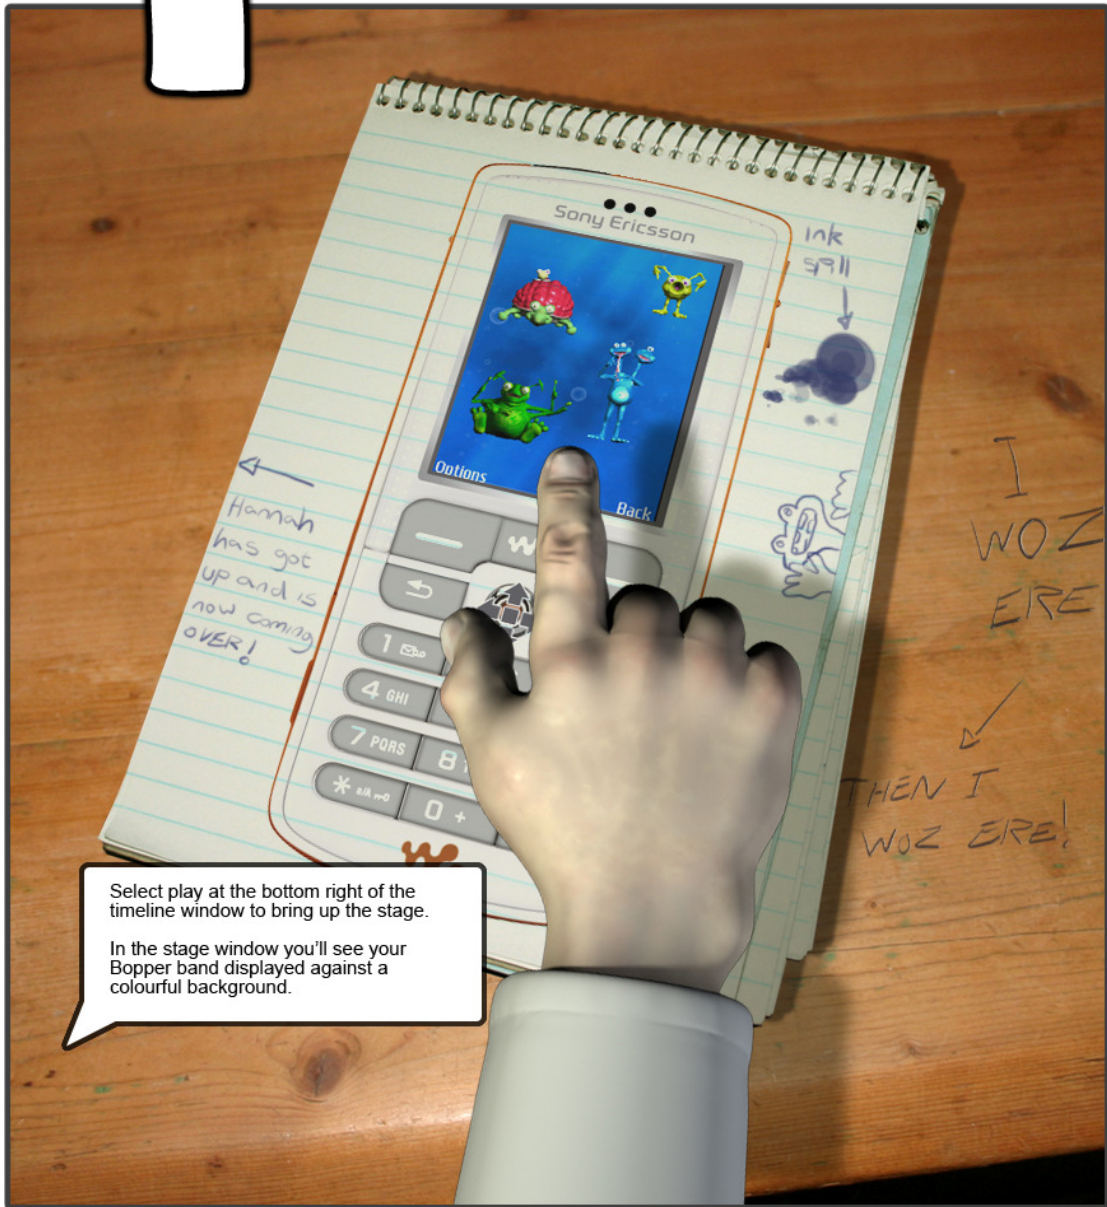

Playback a pattern or the whole song, you can even play from any point on the timeline.

You can also Copy/Cut and paste any pattern or group of patterns anywhere on the timeline.

Loading and saving is also found under this menu.

Use the convert option to turn your bop bands performance into a Bop video ringtone.

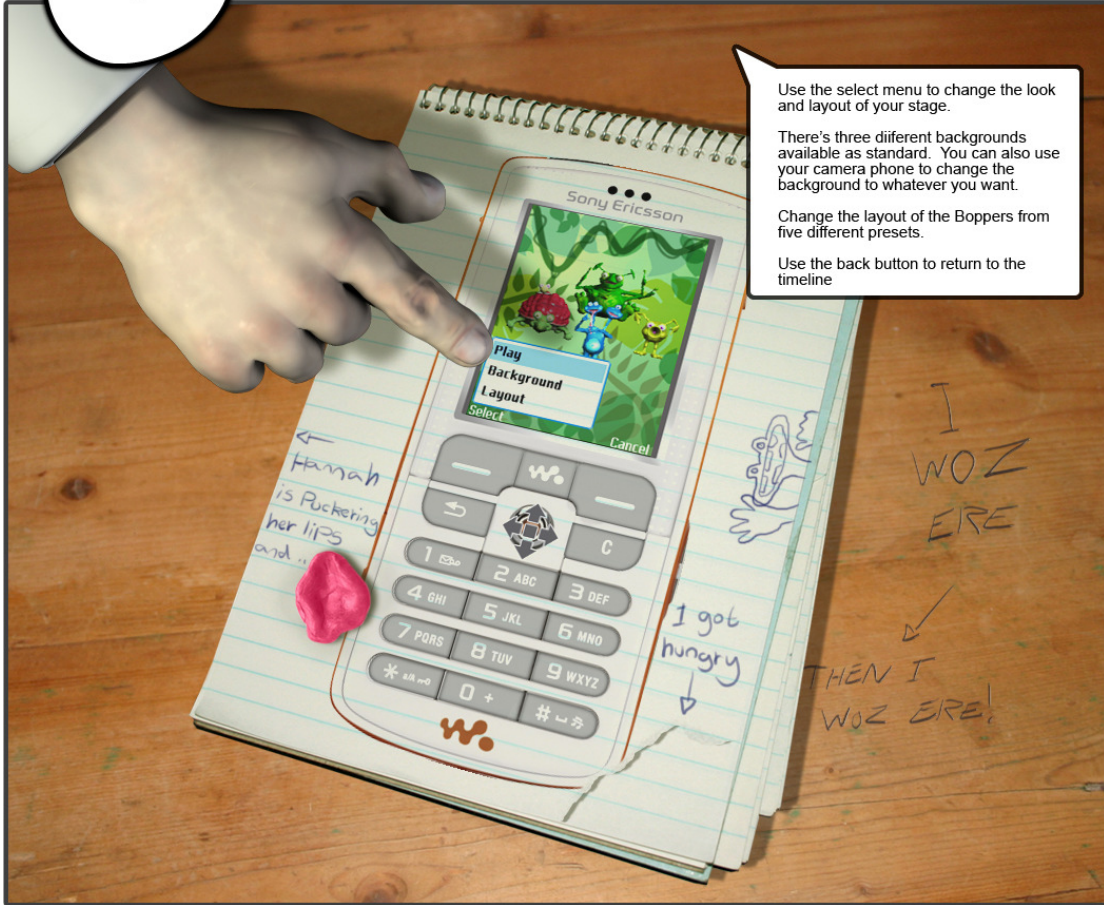

4

Select play at the bottom right of the timeline window to bring up the stage.

In the stage window you'll see your Bopper band displayed against a colourful background.

# 5

Use the select menu to change the look and layout of your stage.

There's three different backgrounds available as standard. You can also use your camera phone to change the background to whatever you want.

Change the layout of the Boppers from five different presets.

Use the back button to return to the timeline
